

SWAGGER-WIDE API TEST REPORT

CargoCore Backend Quality Reference

Comprehensive OpenAPI operation coverage with direct pytest evidence and swagger-driven probe validation.

304 operations | 304 pass | 0 fail | 89 direct cases

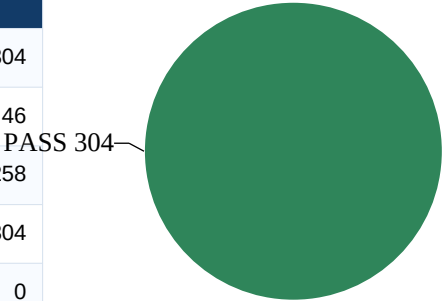

1. Executive Summary

This report combines direct pytest case evidence with swagger-wide probe validation to produce a complete operation-level API verification matrix.

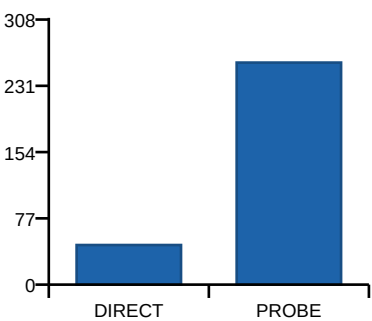

Executive Metrics

Metric	Value
OpenAPI operations	304
Directly covered operations	46
Probe-validated operations	258
PASS rows	304
FAIL rows	0
UNVERIFIED rows	0
Direct test cases	89

Result Mix

Coverage Split

Coverage quality: 304 PASS rows, 0 FAIL rows, 0 UNVERIFIED rows.

2. Swagger-Wide Operation Matrix

Each OpenAPI operation appears exactly once. DIRECT rows come from pytest evidence, while PROBE rows come from the contract-driven missing-endpoint scanner.

#	Operation	Mode	Doc	Obs	Result	Source

4. Mismatch and Historical Fixes

Mismatch rows highlight expected vs actual status differences discovered by either direct tests or probe validation.

Type	Case	Operation	Expected	Actual	Explanation
-	-	No mismatches found in current run.	-	-	Current operation matrix is fully aligned.

Historical fixes from this sprint

- FR-INT-003 payroll run: commit-capable DB override fixed mocked DB commit path in the integration flow.
- AI support flow tests: keyword-compatible monkeypatch signatures fixed router call mismatch.
